[UNAI SDG Hub 4 Chair: Al Balqa Applied University]

My Community

Al-Balqa Applied University (BAU) plays a leading role in the UN-funded "My Community Project " which directly supports SDG 11 (Sustainable Cities and Communities) through circular economy practices and community-based sustainability innovation. The project introduces BAU students into the active role of agents of change for advancing local sustainable development while enhancing their leadership, creativity, and social responsibility.

In Phase (I), BAU set up a rigorous capacity-building program to impart training in entrepreneurship, critical and creative thinking, design thinking, community innovation, sustainability and circular economy, and systems thinking to the students. These modules bridge theory and practice for innovation and are geared toward enabling students to realize scalable sustainability projects. 25% of the total participants are people with disabilities, making the My Community project a true reflection of inclusion, equity, and accessibility issues in sustainable education. This is in line with an institutional policy set by BAU on equal participation and in its broader role as SDG 4 Chair for Quality Education in Jordan.

After the training, students at BAU designed and put forward community projects with sustainable goals. The winning projects are further provided with mentorship opportunities and possible funding from the United Nations to allow the students to carry out the solutions for environmental and societal issues on the ground in their communities at large. The My Community Project is an example of BAU's vision for experiential learning, inclusive participation, and applied sustainability education. It shows how the UN-backed partnership turns students into community innovators, bridging academic know-how and practical applications in pursuance of the 2030 Sustainable Development Agenda.

Under the My Community project, all training and workshops are carried out at the INTERNISA Offline Spot, where participants are given access to digital infrastructure, technical support, and mentoring resources. This approach creates an avenue for

reaffirming BAU's long-term strategy of maintaining EU-funded platforms through programs that are locally owned and community-oriented. Another sustainability extension of the INTERNISA initiative at Al-Balqa University is the My Community Project. Capitalizing on the successes of the INTERNISA Offline Spot, the project intends for the facility to continue to act as a focus for youth training, innovation, and digital empowerment.

By integrating My Community into the daily activities of the INTERNISA center, BAU sets forth a sustainable continuity model for the project that maximizes resources, fosters social inclusion, and promotes community development, which resonates with the sustainability and digital transformation agenda of the university.

DIGIWAVE Women Access Verstile Employment in Digital Economy
